Title: Family History of Incarceration Study (FamHIS) - Release 3

Survey Organization(s): NORC at the University of Chicago

Sponsor(s): Enns, Peter K., Christopher Wildeman, Youngmin Yi, Megan Comfort, Maria Fitzpatrick, Alyssa Goldman, Hedwig Lee, Christopher Muller, Sara Wakefield, and Emily A. Wang, funded by FWD.us

Field Dates: August 13 - September 13, 2018

Sample: National adult, including 1,960 with family incarceration experience

Sample Size: 4041

Sample Notes: None

Interview method: Computer-Assisted telephone interview (CATI); Web-based survey

Weight Location: Columns 17-24 (xxx.xxxx) -- Varname: WEIGHT1

No. of records per respondent: 1

Usage Notes: Release 3 of the Family History of Incarceration data contains additional questions not provided in Release 1 or Release 2. Please review documentation for further details on weighting. This data file is a subset of the full survey dataset. An introduction to the data is available in the following article: Enns, Peter K., Youngmin Yi, Megan Comfort, Maria Fitzpatrick, Alyssa Goldman, Hedwig Lee, Christopher Muller, Sara Wakefield, Emily A. Wang, and Christopher Wildeman. 2019. "What Percentage of Americans Have Ever Had a Family Member Incarcerated? Evidence from the Family History of Incarceration Survey (FamHIS)." *Socius*. Vol 5. Available for download at: <https://doi.org/10.1177/2378023119829332>

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

FAMILY INCARCERATION CORNELL UNIVERSITY

AMERISPEAK FIELD REPORT

NORC Project Manager:

Jennifer Marek | Marek-Jennifer@norc.org

STUDY INTRODUCTION

Note: this field report describes the study-specific details for the AmeriSpeak portion of the Family Incarceration Study. A follow-up report with the details for the RDD-CATI portion of the project will also be provided.

NORC conducted the Family Incarceration Study on behalf of Cornell University using NORC's AmeriSpeak® Panel for the sample source. This research was done to better understand the impact of personal and family incarceration experience.

This study was offered in English and Spanish and administered by phone and on the web.

This AmeriSpeak Field Report supplements the information provided in the *NORC Card*, which provides an in-depth profile of sample quality metrics for the study, the data collection field period, interview sample size, response rate statistics, the design effect, and sampling margins of error, among other statistics. Please refer to the NORC Card for information useful for compliance with the AAPOR Transparency Initiative, in addition to information provided in this AmeriSpeak Field Report.

For more detailed information on the AmeriSpeak panel recruitment and management methodology, please see the Appendix ("Technical Notes on AmeriSpeak Methodology") attached to this AmeriSpeak Field Report.

STUDY-SPECIFIC DETAILS

Sampling

A general population sample of U.S. adults age 18+ was selected from NORC's AmeriSpeak Panel for this study.

The sample for a specific study is selected from the AmeriSpeak Panel using sampling strata based on age, race/Hispanic ethnicity, education, and gender (48 sampling strata in total). The size of the selected sample per sampling stratum is determined by the population distribution for each stratum. In addition, sample selection takes into account expected differential survey completion rates by demographic groups so that the set of panel members with a completed interview for a study is a representative sample of the target population. If panel household has one more than one active adult panel member, only one adult in the household is eligible for selection (random within-household sampling). Panelists selected for an AmeriSpeak study earlier in the business week are not eligible for sample selection until the following business week.

For technical information about the AmeriSpeak Panel, including recruitment process and panel management policies, please see the Appendix.

Field

A small sample of English-speaking AmeriSpeak web-mode panelists were invited on July 31st for a pretest. In total, NORC collected 217 pretest interviews. The initial data from the pretest was reviewed by NORC and a delivered to Cornell University.

Several edits were made after reviewing the incidence rate of family incarceration in the pretest data. Edits included updated survey logic, increasing the target N for family incarceration experience cases (from n=1,500 to n=1,750), and decreasing the target N for no family incarceration experience cases (from n=1,200 to n=1,000).

The main survey was launched on August 13th and closed on September 13th.

In total NORC collected 4,041 screener completes and 2,815 survey completes.

Survey Completion Rates

The screening and main interview stages of data collection were conducted during a single survey session for the respondents. There was a screening stage to identify qualified and eligible panelists. These are the eligible respondents qualified to participate in the second stage, which is the main study interview.

Respondents who answered the screener, regardless of eligibility, are considered a screener complete. Respondents who were determined to be eligible for the study, based on the screener, and who then completed the survey are considered a survey complete. The screener completion rate was 33.7%. The incidence rate was 100%. Among those cases that qualified for the main study interview, the interview completion rate was 69.7%. The summary statistics on sample performance are shown below.

Sample Performance Summary

Sampled/Invited Panelists	No. Screening Interviews Completed	Screener Completion Rate	No. Panelists Eligible for Interview	Incidence / Eligibility Rate	No. Survey Interviews Completed	Interview Completion Rate*
11,992	4,041	33.7%	4,041	100%	2,815	69.7%

*This includes cases that were terminated according to the study design which sub-sampled out Panelists without family incarceration experience.

Incarceration Experience Summary

Screener Completes w/ Incarceration Experience	Screener Completes w/o Incarceration Experience	No. Survey Interviews Completed	Survey Completes w/ Incarceration Experience	Survey Completes w/o Incarceration Experience
1,810	2,231	2,815	1,806	1,009

Please see NORC Card for the AAPOR response rate documentation.

Gaining Cooperation of AmeriSpeak Panelists for the Study

To encourage study cooperation, NORC sent email reminders to sampled web-mode panelists on the following dates:

- Friday, August 17th
- Thursday, August 23rd
- Monday, August 27th
- Sunday, September 2nd
- Friday, September 7th
- Tuesday, September 11th

Panelists were offered the cash equivalent of \$4 for completing this survey. The incentive was increased to \$10 the last two days in field to boost cooperation.

Data processing

NORC prepared a fully labeled data file of respondent survey data and demographic data for Cornell University.

NORC applied cleaning rules to the survey data for quality control by removing survey responses in the main study interview questions from non-eligible respondents. These respondents went backwards in the survey to revise their answer in the screening question to become non-eligible after responding to some questions meant for eligible respondents in the main study interview. Because these respondents indicated they did not meet the screening criteria to be eligible for the main study interview, the survey responses from these respondents were deleted. These respondents were not counted toward the total number of interviews delivered.

Statistical Weighting

Statistical weights for the study eligible respondents were calculated using *panel base sampling weights* to start.

Panel base sampling weights for all sampled housing units are computed as the inverse of probability of selection from the NORC National Frame (the sampling frame that is used to sample housing units for AmeriSpeak) or address-based sample. The sample design and recruitment protocol for the AmeriSpeak Panel involves subsampling of initial non-respondent housing units. These subsampled non-respondent housing units are selected for an in-person follow-up. The subsample of housing units that are selected for the nonresponse follow-up (NRFU) have their panel base sampling weights inflated by the inverse of the subsampling rate. The base sampling weights are further adjusted to account for unknown eligibility and nonresponse among eligible housing units. The household-level nonresponse adjusted weights are then post-stratified to external counts for number of households obtained from the 2018 Current Population Survey. Then, these household-level post-stratified weights are assigned to each eligible adult in every recruited household. Furthermore, a person-level nonresponse adjustment accounts for nonresponding adults within a recruited household.

Finally, panel weights are raked to external population totals associated with age, sex, education, race/Hispanic ethnicity, housing tenure, telephone status, and Census Division. The external population totals are obtained from the Current Population Survey. The weights adjusted to the external population totals are the *final panel weights*.

Study-specific base sampling weights are derived using a combination of the final panel weight and the probability of selection associated with the sampled panel member. Since not all sampled panel members respond to the screener interview, an adjustment is needed to account for and adjust for screener non-respondents. This adjustment decreases potential nonresponse bias associated with sampled panel members who did not complete the screener interview for the study.

Furthermore, among eligible sampled panel members (as identified via the survey screener questions), not all complete the survey interview for the study. Thus, the *screener nonresponse adjusted weights for the study* are adjusted via a raking ratio method to general population totals of U.S. adults (with or without family incarceration experience) associated with the following socio-demographic characteristics: age, sex, education, race/Hispanic ethnicity, and Census Division. The weights adjusted to the external population totals are the *final study weights*.

Raking and re-raking is done during the weighting process such that the weighted demographic distribution of the survey completes resemble the demographic distribution in the target population. The assumption is that the key survey items are related to the demographics. Therefore, by aligning the survey respondent demographics with the target population, the key survey items should also be in closer alignment with the target population.

There are two sets of final study weights. WEIGHT1 includes all screener completes (n=4,041) and these cases are weighted to the general population. For analysis of the total screener completes (n=4,041), use WEIGHT1. A second set of weights was also created for only the final survey completes (n=2,815). These

weights are benchmarked to the general population, but are adjusted for the subsampled cases family incarceration experience. For analysis of the final survey completes (n=2,815), use WEIGHT2.

Deliverables

The following files were created for Cornell University as part of the study deliverables:

- Survey interview data file in both SPSS, STATA, and SAS formats
- Codebook in Excel format
- Final programming questionnaire in Word document
- Field report documenting study procedures
- NORC Card

HOW TO DESCRIBE AMERISPEAK AND NORC @ THE UNIVERSITY OF CHICAGO

For purposes of publication, when describing AmeriSpeak and its panel methodology, we recommend using the following language:

Funded and operated by NORC at the University of Chicago, **AmeriSpeak®** is a probability-based panel designed to be representative of the US household population. Randomly selected US households are sampled using area probability and address-based sampling, with a known, non-zero probability of selection from the NORC National Sample Frame. These sampled households are then contacted by US mail, telephone, and field interviewers (face to face). The panel provides sample coverage of approximately 97% of the U.S. household population. Those excluded from the sample include people with P.O. Box only addresses, some addresses not listed in the USPS Delivery Sequence File, and some newly constructed dwellings. While most AmeriSpeak households participate in surveys by web, non-internet households can participate in AmeriSpeak surveys by telephone. Households without conventional internet access but having web access via smartphones are allowed to participate in AmeriSpeak surveys by web. AmeriSpeak panelists participate in NORC studies or studies conducted by NORC on behalf of governmental agencies, academic researchers, and media and commercial organizations.

For more information, email AmeriSpeak-BD@norc.org or visit AmeriSpeak.norc.org.

If editors or reviewers are requesting anything more specific or any other detail, please reach out to us to make certain you are using accurate language.

NORC at the University of Chicago is best described as follows:

NORC at the University of Chicago is an independent research institution that delivers reliable data and rigorous analysis to guide critical programmatic, business, and policy decisions. Since 1941, NORC has conducted groundbreaking studies, created and applied innovative methods and tools, and advanced principles of scientific integrity and collaboration. Today, government, corporate, and nonprofit clients around the world partner with NORC to transform increasingly complex information into useful knowledge. Please visit www.norc.org for more information.

APPENDIX

TECHNICAL OVERVIEW OF THE AMERISPEAK® PANEL NORC'S PROBABILITY-BASED RESEARCH PANEL

Updated February 6, 2018

Prepared by J. Michael Dennis, Ph.D.

Funded and operated by NORC at the University of Chicago, AmeriSpeak® is a probability-based panel designed to be representative of the US household population. Randomly selected US households are sampled with a known, non-zero probability of selection from the NORC National Frame and address-based sample, and then contacted by US mail, telephone interviewers, overnight express mailers, and field interviewers (face to face). AmeriSpeak panelists participate in NORC studies or studies conducted by NORC on behalf of NORC's clients.

In 2017, the AmeriSpeak Panel expanded to 27,000 households and will expand to 30,000 households in 2018. The AmeriSpeak Panel includes sample support for surveys of various segments through AmeriSpeak Latino, AmeriSpeak Teen, and AmeriSpeak Young Adult (which includes an oversample of African Americans, Hispanics, and Asians age 18-34). AmeriSpeak also supports large-sample size surveys and surveys of low-incidence populations through AmeriSpeak Calibration, which combines probability-based AmeriSpeak and non-probability online samples using calibrating statistical weights derived from AmeriSpeak.

Sample Frame

In order to provide a nationally representative sample, AmeriSpeak leverages the NORC National Frame, which provides sample coverage for over 97 percent of the U.S. households. The 2010 National Frame used a two-stage probability sample design to select a representative sample of households in the United States. The first stage—the sampling unit—is a National Frame Area (NFA), which is either an entire metropolitan area (made up of one or more counties) or a county (some counties were combined so that each NFA contains a population of at least 10,000). The largest NFAs with a population of at least 1,543,728 (0.5 percent of the 2010 Census U.S. population) were selected with certainty; these areas have a high-population density, and are dominated by tracts with street-style addresses. These areas contain 56 percent of the population within 8 percent of the geographic area of the United States. The remaining areas were stratified into areas where street-style addresses predominate, and the remaining areas, which are less likely to have street-style addresses. The latter stratum (“rural” areas) comprises 81 percent of the geographic area, but only 14 percent of the population.

Within the selected NFAs, the second stage sampling unit is a segment, defined either in terms of Census tracts or block groups, containing at least 300 housing units according to the 2010 Census. A stratified probability sample of 1,514 segments was selected with probability proportional to size. For most of the 1,514 segments, the U.S. Postal Service Delivery Sequence File (DSF) provided over 90 percent coverage of the segments in terms of city-style addresses that are geo-codeable. For the 123 segments where the DSF provided insufficient coverage, we enhanced the DSF address list with in-person listing. The National Frame contains almost 3 million households, including over 80,000 rural households added through the in-person listing.

The National Frame involves addresses in almost every state. For the remaining states, AmeriSpeak added some address-based sampling (ABS) addresses in 2016 and 2017 from the USPS DSF to assure AmeriSpeak sample representation for all US States and Washington, DC.

In 2017, a targeted address-based sample was added to AmeriSpeak recruitment in order to develop a new Latino Panel with adequate representation of Spanish-language-dominant Hispanics. Census tracts with high incidence (at least 30%) of Spanish-dominant Hispanics were targeted for this recruitment. Furthermore, within these Census tracts, households that were flagged as Hispanic based on consumer vendor data (that are typically used for direct-mail marketing) were oversampled. This new AmeriSpeak Latino Panel contains approximately 5,400 Hispanic panelists with 24% of those panelists being Spanish-language dominant. As of August 2017, 13% of AmeriSpeak Panel (including the Latino Panel) recruited adults were sourced from the ABS and 87% from the National Frame. Proper weights allow the full use of the combined sample.

Sample Selection for Panel Recruitment

The 2014-2017 AmeriSpeak Panel sample consists of nationally representative housing units drawn from the 2010 NORC National Sample Frame and 14% from address-based sampling (which was primarily to develop AmeriSpeak Latino). The 2010 NORC National Sample Frame is stratified based on segment (Census tract or Census block group) characteristics such as age and race/ethnicity composition of the segment, and then, a stratified simple random sample of housing units is selected. Specifically, based on Census tract-level data, segments were classified as having a higher concentration of 18-24 year old adults or not, and a higher concentration of Hispanics, non-Hispanic African Americans, and other. Based on these strata definitions, 6 strata (2 based on age times 3 based on race/ethnicity) were used to oversample housing units in segments higher in young adults and/or Hispanics and non-Hispanic African-Americans. This is referred to as the initial sample or first stage of panel recruitment.

In the second stage of panel recruitment, initially sampled but nonresponding housing units are subsampled for a nonresponse follow-up (NRFU). At this stage, consumer vendor data are matched to housing units, and housing units that are flagged (based on consumer vendor data) as having a young adult (18-34 years of age) or minority (Hispanic and non-Hispanic African American) are oversampled for the NRFU. Overall, approximately one in five initially nonresponding housing units are subsampled for NRFU. However, as mentioned previously, selection of housing units for NRFU is a stratified simple random sample based on consumer vendor data. Due to NRFU, these initially nonresponding housing units have a much higher selection probability compared to the housing units that were recruited during the first stage of panel recruitment. Note that a small fraction of initially nonresponding housing units are not eligible for NRFU due to these housing units being classified as “hard refusals” or having an appointment for a call back from NORC.

In summary, there are two reasons why the sampling design for AmeriSpeak Panel recruitment deviates from Equal Probability of Selection Method (EPSEM) sampling: (a) oversampling of housing units in segments with a higher concentration of young adults and minorities results in the sample selection probabilities being higher for housing units in these segments; and (b) the nonresponse follow-up effort results in initially nonresponding housing units having a much higher selection probability. Furthermore, oversampling associated with NRFU results in higher selection probabilities for initially nonresponding housing units that are flagged (based on consumer vendor data) as having a young adult or minority.

AmeriSpeak Panel Recruitment Procedures

Recruitment is a two-stage process: initial recruitment using less expensive methods and then non-response follow-up using personal interviewers. For the initial recruitment, sample units are invited to join AmeriSpeak online by visiting the panel website AmeriSpeak.org or by telephone (in-bound/outbound supported). English and Spanish language are supported for both online and telephone recruitment. Study invitations are communicated via an over-sized pre-notification postcard, a USPS recruitment package in a 9”x12” envelope (containing a cover letter, a summary of the privacy policy, FAQs, and a study brochure), two follow-up post cards, and also contact by NORC’s telephone research center for sample units matched to a telephone number.

The second-stage non-response follow-up targets a stratified random sub-sample of the non-responders from the initial recruitment. Stratification is based on consumer vendor data and stratification variables from the initial recruitment stage in order to increase sample representation of young adults (18-34 years of age), non-Hispanic African Americans, and Hispanics. Units sampled for the non-response follow-up are sent by Federal Express a new recruitment package with an enhanced incentive offer. NORC field interviewers then make personal, face-to-face visits to the respondents' homes to encourage participation. NORC field interviewers administer the recruitment survey in-person using CAPI or else encourage the respondents to register at AmeriSpeak.org or call the toll-free AmeriSpeak telephone number to register.

Recruiting Non-Internet and “Net Averse” Households

Under certain conditions, AmeriSpeak gives respondents a choice regarding their preferred mode for future participation in AmeriSpeak surveys. For the 2014-2017 recruitment, 82% of panelists were enrolled in AmeriSpeak to receive online surveys, while 18% of the panelists agreed to participate in AmeriSpeak telephone mode surveys. For the 2016 and 2017 recruitment, respondents provided an option of online or telephone modes include: persons without internet access, persons whose only internet access is via a smartphone, and persons with internet access but unwilling to share an email address. A recruited household can consist of both web-mode and phone-mode panelists residing in the same household.

Impact of Non-Response Follow-up

The non-response follow-up (NRFU) reduces non-response bias significantly by improving the representativeness of the AmeriSpeak panel sample with respect to certain demographic segments, including but not limited to rural and/or lower income households, cell-phone only households, persons age 18 to 34, African Americans, Hispanics, and persons without a high school degree or have only a high school degree (no college). Even though NRFU panelists are more reluctant to complete surveys, the addition of NRFU panelists reduced absolute bias on average 35-40% when compared to the initial stage recruits (among examined surveys). Compared to panelists recruited in the initial stage, panelists recruited via the non-response follow-up campaign are more politically conservative, are less knowledgeable about science, report less interest in current events and topics in the news (such as climate change and energy resources), and are less likely to read a print newspaper (more likely to read the news online and use social media). They are also more likely to attend church, be against gun control, and more likely to eat at a fast food restaurant than the initial stage recruits. Accordingly, NRFU panelists make the substantive estimates in any AmeriSpeak study more representative and accurate.

AmeriSpeak Panel Recruitment Response Rate and Other Sample Metrics

The AAPOR RR3 (response rate) for the 2014-2017 panel recruitment 33.7% (weighted to take into account selection probabilities).¹ The estimated cumulative AAPOR RR3 for client surveys is 10% to 20% (varying according to study parameters and taking into account all sources of non-response including panel recruitment, panel household attrition, and survey participation).² NORC documented the AAPOR response rate calculation methodology for 2014-2015 recruitment.³

Key statistics with respect to the 2014-2017 recruited households are as follows: 52% recruited via the non-response follow-up recruitment using overnight Federal Express mailers and face-to-face methodology (with

¹ The response rate calculation incorporates the selection probabilities of the samples for the initial recruitment and non-response follow-up stages, as calculated by the US Bureau of the Census for the American Community Survey.

² A properly calculated AAPOR response rate for panel-based research takes into account all sources of non-response at each stage of the panel recruitment, management, and survey administration process. A common misapplication of the term “response rate” in online panel surveys is represent the survey-specific cooperation rate as the “survey response rate.”

³ See “Response Rate Calculation Methodology for Recruitment of a Two-Phase Probability-Based Panel: The Case of AmeriSpeak” authored by Robert Montgomery, J. Michael Dennis, Nada Ganesh. The paper is available at amerispeak.norc.org on the “research” page.

NORC field staff visiting households); 18% indicated a preference for the telephone mode of data collection for participating in AmeriSpeak studies; 22% of the recruited households are non-Internet; 80% are cell-phone only or cell-phone mostly; 18% are African-American and 24% Hispanic; and 36% have household income below \$30,000 (compared to CPS benchmark of 26%).

Mixed-Mode Data Collection

Panelists may participate in two to three AmeriSpeak Panel studies per month via online (computer, tablet, or smartphones) or by CATI phone. CATI phone mode respondents represent a population currently under-represented in web panels that exclude non-internet households or “net averse” persons. NORC’s telephone interviewers administer the phone mode of survey questionnaires using a data collection system supporting both the phone and web modes of data collection, providing an integrated sample management and data collection platform. For panelists using smartphones for web-mode AmeriSpeak surveys, the NORC survey system renders an optimized presentation of the survey questions for these mobile users. For general population client studies, approximately 20% of the completed interviews are completed by the telephone mode.

Panel Management Policies

NORC maintains strict rules to limit respondent burden and reduce the risk of panel fatigue. On average, AmeriSpeak panel members typically participate in AmeriSpeak web-based or phone-based studies two to three times a month.

Because the risk of panel attrition increases with the fielding of poorly constructed survey questionnaires, the AmeriSpeak team works with NORC clients to create surveys that provide an appropriate user experience for AmeriSpeak panelists. AmeriSpeak will not field surveys that in our professional opinion will result in a poor user experience for our panelists and in panel attrition.

ABOUT NORC AT THE UNIVERSITY OF CHICAGO

As one of the world’s foremost independent research institutions, NORC at the University of Chicago delivers objective data and meaningful analysis to help decision-makers and leading organizations make informed choices and identify new opportunities. Since 1941, NORC has applied sophisticated methods and tools, innovative and cost-effective solutions, and the highest standards of scientific integrity and quality to conduct and advance research on critical issues. Today, NORC expands on this tradition by partnering with government, business, and nonprofit clients to create deep insight across a broad range of topics and to disseminate useful knowledge throughout society.

Headquartered in downtown Chicago, NORC works in over 40 countries around the world, with additional offices on the University of Chicago campus, the DC metro area, Atlanta, Boston, and San Francisco.

ADDITIONAL RESOURCES

To learn more about AmeriSpeak or to share an RFP, please contact AmeriSpeak at AmeriSpeak-BD@norc.org. Information about AmeriSpeak capabilities and research papers are available online at AmeriSpeak.NORC.org.

OVERVIEW

Date of Report: September 20, 2018
 Project Title: Family Incarceration Study
 Project Number: 8337
 Prepared For: Cornell University
 Expected Elig.: 100.0%
 Observed Elig.: 100.0%
 Study Population: General Population Age 18+

Start Date: August 13, 2018
 End Date: September 13, 2018
 Sampled Units: 11,992
 Completed Interviews: 2,815
 Design Effect: 1.70
 Margin of Error: 2.01%
 Median Intvw. Length: 11 minutes

Overview Section

Sampled Units: The number of panel members sampled for the survey.

Start/End Dates: Start and end dates represent the earliest and latest contact dates of cases sampled for the survey.

Completed Interviews: The number of members completing the interview through the “thank you” screen of the interview. It does not include any interviews removed during data processing.

Interview length: Length of time for completed interviews. Interview length is calculated differently depending upon whether the interview was conducted over the phone or via web. For telephone mode, it is the time from when the respondent picks up the telephone until they hang up the telephone. For web interviews, it is the time from when they first connect to the web system to the time they log off the system or become inactive. In the case of multiple contacts, this number represents the sum of those contacts.

Margin of Error: The Margin of Error is calculated by assuming we have a binomial variable where 50% of respondents give each answer (giving the most conservative margin of error). We then calculate the Margin of Error at a 95% confidence level for that hypothetical variable assuming all completed interviews answer the question and taking into account the design effect.

Design Effect: The design effect is the amount of variance under the complex design divided by the variance under the SRS (simple random sampling). This is calculated for a minimum of five key substantive survey variables and the median value is reported.

Response Rate Section

Weighted Recruitment Rate: The weighted AAPOR RR III for the AmeriSpeak panel recruitment for recruitment cohorts sampled for the study. A recruited sample unit is defined as a household where at least one adult successfully completed the recruitment survey and joined the panel.

Weighted Household Retention Rate: Calculated at the household level, it represents the weighted percent of recruited households still available for sampling for this survey among the recruitment cohorts sampled for the study.

Screener Completion Rate: Calculated at the member level, it represents the percent of sampled members who completed the screening questions and therefore with known eligibility status for the current study. Studies without a screener have the screener completion rate as 100 percent.

Survey Completion Rate: Calculated at the member level,

- For a study without a screener: it is the percent of final respondents among sampled units for the study;
- For a study with screener: it is the percent of final respondents among eligible respondents who finished the screener;
- For a follow-up study: it is the percent of follow-up respondents among baseline respondents.

Weighted Cumulative Response Rate: The overall rate represents the product of the recruitment rate, the retention rate, and the survey completion rate. It is weighted to account for the sample design and face-to-face non-response follow-up of the initial recruitment survey.

NORC Card is provided to AmeriSpeak clients in support of the AAPOR Transparency Initiative.

Benchmark Comparison Section

We compare nationwide demographics (CPS February 2018) to those of our survey respondents who completed the screener, both on a weighted and unweighted basis. We use this information to determine how well AmeriSpeak respondents represent the demographics of Americans overall.

Weight Location

This data set contains two sets of final sampling weights. `weight1` includes all respondents (n=4,041) and weights respondents to the U.S. non-institutionalized adult population aged 18 and older. A second set of weights, `weight2` was created for *only* the respondents who received the extended survey, which includes all respondents who reported any immediate family incarceration experience and a random sample of the subset of respondents who reported no immediate family incarceration (n=2,815). `weight2` accounts for the fact that the survey included a random subsample of respondents with no immediate family incarceration experience. Analyses of family incarceration experience (q1 through q2) should use `weight1`. Analyses of the other survey questions (including extended family member incarceration and personal criminal justice experience, q3 through q44) and analyses comparing those with and without incarceration experience should use `weight2`. Demographic measures that provide information about respondent characteristics and survey mode/language (all measures that do not start with "q") were provided for all respondents (n=4,041), so `weight1` should be used if these measures are the *outcome* of interest or if analyses only use these measures and/or those pertaining to immediate family incarceration.

**Family History of Incarceration
Study (FamHIS)
Questionnaire, Release 3**

Client	Cornell University/NORC Public Affairs
Project Name	Family Incarceration
Project Number	8337
Survey length (median)	12 minute survey
Population	Gen pop 18+, oversample of adults age 18+ in New York, Oklahoma, Arizona, and Mississippi; oversample completes from RDD
Pretest	N=200
Main	N=12,000 The main national sample will include 10,000 interviews as follows: Adults with family incarceration experience will be interviewed up to a maximum of 1750. A subsample of 1000 adults without family incarceration experience will be interviewed. Any adults without incarceration experience beyond the 1000 will be screened but not interviewed. The state oversamples will include 1600 interviews with 400 in each state.
MODE	Web and Phone
Language	English/Spanish
Incentive	4,000
Survey description	Family Experiences
Eligibility Rate	30%

Standard demographic preloads:

<u>Var Name</u>	<u>Var Type</u>	<u>Var length</u>	<u>Variable Label</u>
S_AGE	Numeric	5	Age
S_GENDER	String	8	Gender
S_RACETH	Numeric	8	Race/ethnicity

[DISPLAY_1]

This is a study about the criminal justice system, including policies on prisons and jails.

Este es un estudio sobre el sistema judicial penal, incluyendo políticas sobre prisiones y cárceles.

PROGRAM Q1 AND Q2 ON THE SAME SCREEN

[PROMPT FOR Q2]

[SP]

Q1.

How much confidence do you have in the criminal justice system in your area?

¿Cuánta confianza tiene usted en el sistema judicial penal de su área?

RESPONSE OPTIONS:

1. Very little confidence
2. Some confidence
3. A great deal of confidence

1. Muy poca confianza
2. Un poco de confianza
3. Mucha confianza

[SP]

Q2.

Many people have been held in jail or prison for a night or more at some point in their lives. Please think about your immediate family, including parents; brothers; sisters; children; and your current spouse, current romantic partner, or anyone else you have had a child with. Please include step, foster, and adoptive family members.

Muchas personas han estado en prisión o en la cárcel por una noche o más en algún momento de su vida. Por favor piense en su familia cercana, incluyendo a sus padres; hermanos; hermanas; hijos; y su actual esposo, pareja, o a cualquier otra persona con quien tenga un hijo/a. Por favor incluya a familiares adoptados, políticos o de crianza.

[SPACE]

Confidentially and for statistical purposes only, have any members of your immediate family, <u>NOT</u> including yourself, ever been held in jail or prison for one night or longer?

En forma confidencial y sólo con fines estadísticos, ¿alguno de los miembros de su familia más próxima, <u>SIN</u> incluirse a usted, ha estado en prisión o en la cárcel por una noche o más?

CAWI RESPONSE OPTIONS:

1. Yes
2. No, none of these family members were ever in prison or jail for one night or longer

1. Sí
2. No, ninguno de estos familiares ha estado en prisión o en la cárcel por una noche o más

CATI RESPONSE OPTIONS:

1. YES
2. NO

1. SÍ
2. NO

UPDATE 9/10—REMOVING Q2 SCREENING LOGIC AND P_TERM LOGIC—ALL R'S WILL BE ASSIGNED
DOV_PATH=1 AND CONTINUE TO Q3.

Q24.

Often when accused of a crime, a person will accept a plea deal in which they legally admit to being guilty of a crime in exchange for a reduced sentence. Do you recall if you accepted a plea deal, or not?

A menudo, cuando se le acusa de un delito, la persona acepta un trato negociado por el cual admiten legalmente ser culpables de un delito a cambio de una pena reducida. ¿Recuerda haber aceptado usted un trato negociado, o no?

[CATI]: If you aren't sure, you can just say so.

[CATI]: Si no está seguro/a, puede decirlo simplemente.

CAWI RESPONSE OPTIONS:

1. Yes, I did
2. No, I didn't
77. Not sure

1. Sí, lo hice
2. No, no lo hice
77. No estoy seguro/a

CATI RESPONSE OPTIONS:

1. Yes, you did
2. No, you didn't
77. Not sure

1. Sí, lo hizo
2. No, no lo hizo
77. No estoy seguro/a

[TEXT BOX] [CATI version needs “no” option]

QFINAL3.

Do you have any general comments or feedback on this survey you would like to share? If you would like a response from us, please email support@AmeriSpeak.org or call (888) 326-9424.

QFINAL3. ¿Tiene algún comentario u observación sobre esta encuesta que le gustaría compartir con nosotros? Si desea recibir una respuesta de nosotros, por favor envíe un mail a ayuda@AmeriSpeak.org o llámenos al (888) 326-9424.

[IF CATI AND DOV_MAIN=2]

[DISPLAY]

SHORT_END

We realize this survey was shorter than initially stated. However, you will still be receiving 4000 points for participating.

Nos damos cuenta de que esta encuesta fue más breve de lo que fue indicado inicialmente. Sin embargo, usted seguirá recibiendo 4000 puntos por participar.

[DISPLAY]

END.

[CATI version]

Those are all the questions we have. You have earned a reward of [INCENTWCOMMA] AmeriPoints for completing the survey. If you have any questions at all for us, you can email us at support@AmeriSpeak.org or call us toll-free at **888-326-9424**. Let me repeat that again: email us at support@AmeriSpeak.org or call us at **888-326-9424**. Thank you for participating in our new AmeriSpeak survey!

Esas fueron todas las preguntas. Usted ha ganado una recompensa de [INCENTWCOMMA] Ameripoints por completar esta encuesta. Si tiene alguna pregunta, puede enviarnos un correo electrónico a ayuda@AmeriSpeak.org o llamarnos al número gratuito **888-326-9424**. Permítame repetirlo nuevamente: envíenos un correo electrónico a ayuda@AmeriSpeak.org o llámenos al **888-326-9424**. ¡Gracias por participar en nuestra nueva encuesta AmeriSpeak!
